EDUCATION

Mahindra University

B.Tech in Computer Science and Engineering

Aug 2023 – Present

CGPA: 8.50

Sri Chaitanya Junior College

Intermediate (10+2)

May 2021 – May 2023

CGPA: 9.50

Coursework: Data Structures & Algorithms, Object Oriented Programming (Java), DBMS, Operating Systems, Computer Networks, Machine Learning, Artificial Intelligence

SKILLS

Languages: Python, C, Java, SQL, HTML, CSS

Technologies: React.js, Next.js, Node.js, Express.js, REST APIs, PostgreSQL, MongoDB, LLM APIs, Agentic AI, Prompt Engineering, Embeddings, Vector Search, PyTorch, Scikit-learn, Pandas, NumPy, Azure, Azure DevOps, CI/CD, Git/GitHub, Postman

Core Concepts: Data Structures & Algorithms, OOP, Computer Networks, Operating Systems, Database Management Systems, Machine Learning, Deep Learning, GenAI.

PROJECTS

Circular Economy Marketplace — *React.js, PostgreSQL, Express.js, Azure* Feb 2026 – April 2026

– **Links:** [GitHub](#) | [Live Website](#)

- Developed a full-stack marketplace enabling users to buy and sell products, implementing RESTful APIs with Express.js and integrating a React.js frontend with PostgreSQL for product listings, search, and user interactions
- Configured Azure DevOps CI/CD pipelines to automate build, testing, and deployment to Azure App Service from GitHub, enabling streamlined and reliable releases

Digital Twin AI Assistant — *Python, Agentic AI, LLM APIs, JSON*

Jun 2026– Sep 2026

– **Links:** [GitHub](#)

- Built an Agentic AI-powered digital twin chatbot that answers questions about my academic background, technical skills, projects, achievements, and resume.
- Implemented intent routing, context management, and structured knowledge retrieval to provide accurate, conversational responses about my profile.

Predicting Human Annotator Disagreement — *PyTorch, Deep Learning*

May 2026 – Jun 2026

– **Links:** [GitHub](#)

- Engineered a deep neural network to model human annotation uncertainty on the CIFAR-10H dataset using soft-label probability distributions instead of conventional hard-label classification.
- Optimized and benchmarked the model with KL Divergence, Jensen-Shannon Divergence, entropy-based evaluation metrics, and Grad-CAM visualizations to improve prediction reliability and explainability.

EXPERIENCE

Aero Club — *Head of Software*

Aug 2025 – Jun 2026

- Developed and deployed OpenCV-based computer vision algorithms on a Raspberry Pi for real-time QR code detection and autonomous target identification.
- Integrated the Raspberry Pi vision module with the ArduPilot flight controller, enabling autonomous drone navigation and mission execution based on computer vision outputs.

ACHIEVEMENTS

- Awarded **Merit Scholarship** for the academic year **2025–2026** at Mahindra University for strong academic performance.
- Secured **11th place out of 100 teams** in the **ADDC India Drone Competition**, demonstrating expertise in autonomous drone software, computer vision, and system integration.
